Description

Simrad Multifunction Display Integration

Designed to work with your Simrad chartplotter navigation display, the Outboard Pilot pack does not require a dedicated autopilot head unit – perfect for smaller vessels with limited helm space. Set your heading, steer to a waypoint, or follow a predefined route, right from your existing Simrad display. A single dash-mounted auto/standby button lets you enable the autopilot with ease, or take manual helm control in an instant.

Easy to Install

This comprehensive kit includes everything required for a professional or DIY autopilot installation. Detailed step-by-step instructions are provided, while pre-fitted plug-and-socket connectors make installation quicker and easier than ever. The included helm-drive unit features a built-in outboard position sensor right at the helm, delivering smooth and reliable steering performance without the need to connect a feedback sensor directly to your outboard.

Simple System, Powerful Features

Automatic turn patterns make manoeuvres such as U-turns simple and fuel-efficient, while more complex patterns support fishing and other on-water activities. Outboard Pilot also offers automatic Depth Contour Tracking that's perfect for anglers fishing ledges or drop-offs, and also a great way to cruise along the coastline while automatically maintaining a safe depth beneath your boat.

Features :

- Complete autopilot system for cable-steered single-outboards
 - Intuitive autopilot control from your Simrad multifunction display
 - Powerful features including turn patterns and Depth Contour Tracking
 - Suitable for boats measuring nine metres (30 feet) and under
 - Perfect for DIY installation with a straightforward, step-by-step guide
 - Simple plug-and-socket connection with no complex terminal wiring
-
